PROGRAM OVERVIEW

The Bachelor of Science in Computer Information Systems – Networking at the School of Media and Design provides its students with a broad base of theoretical and experiential knowledge and skills that responds to the rapid changes in the field. Graduates of the UIW CIS Program can plan, design, assemble, and operate computer systems and networks for a wide range of organizations. CIS students install, configure, program, protect, administer, and apply hardware and software systems. They also gain the types of social skills required to be successful today, including team working, decision-making, visual modeling, project management, and effective technical and non-technical communications.

QUICK FACTS

- Our modern world is dependent on people using computer devices to communicate with others. Knowing how networking and telecommunications work and how to develop and create networks at all levels from devices within and on your body to interplanetary spacecraft is an indispensable skill for the future. The emerging Internet of Things (IoT) promises to open many more opportunities for people skilled in computer networking.
